

# Streamlining CRVS Systems and Vital Statistics Production through Business Process Improvement

Using a process-centric approach for improving civil registration and vital statistics system and producing vital statistics based on civil registration data

Romain Santon

Vital Strategies

Data for Health Initiative

Friday, November 15<sup>th</sup>, 2023

7<sup>th</sup> Asian and Pacific Population Conference

Side Event: Getting everyone in the picture: investing in children

## Presentation overview:

1. Overview of the CRVS Systems Improvement Framework
2. Vital Statistics based on civil registration data
3. Technical Guidance for Strengthening the Vital Statistics Production Process

# Overview of the CRVS Systems Improvement Framework

# The CRVS Systems Improvement Framework: A process centric approach

- Provides guidance to countries to continually improve the performance of the CRVS system
- Adopts a process-centric approach
- Is results driven and rights-based
- Enables a multi-sectoral, participatory, and country led and owned approach to CRVS system strengthening
- Customizable to country needs

# What is a Business Process?

A business process is a chain of events, activities and decisions organized logically to accomplish a certain goal.

1.

Every process has some inputs

2.

Different stakeholders perform some tasks

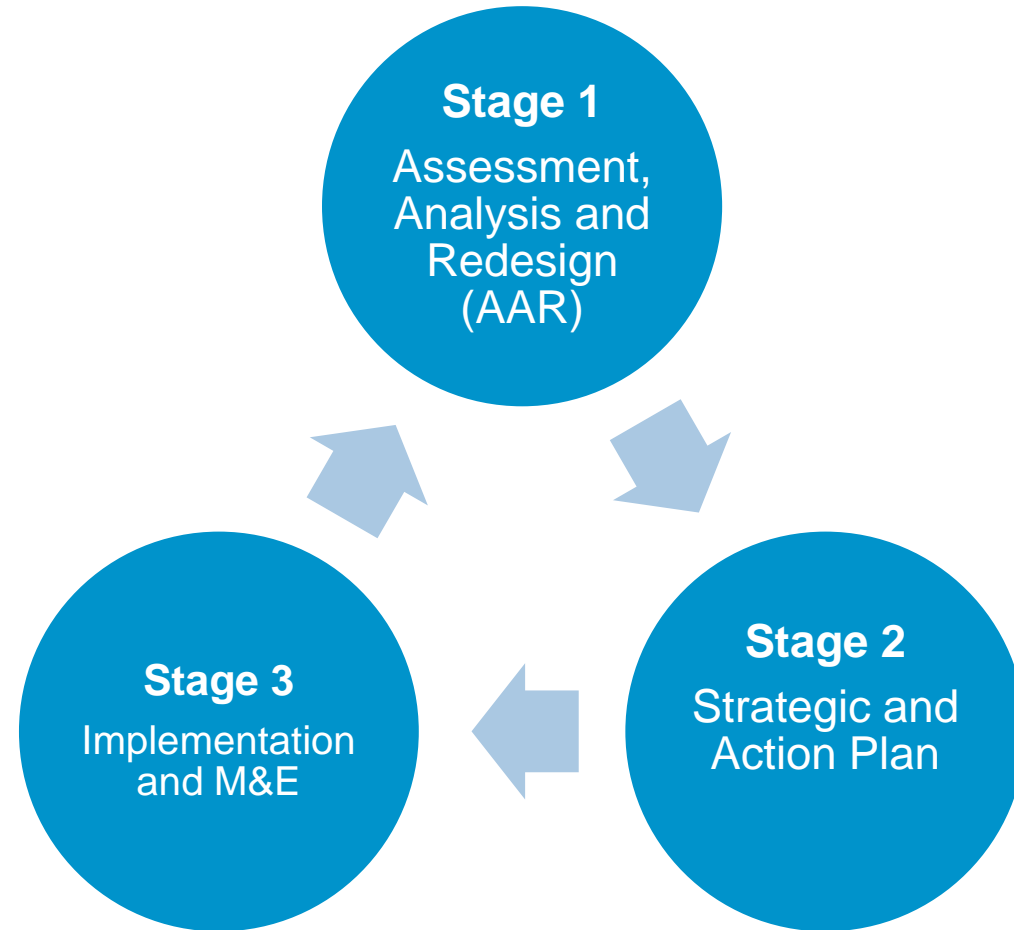

3.

the process has some outputs

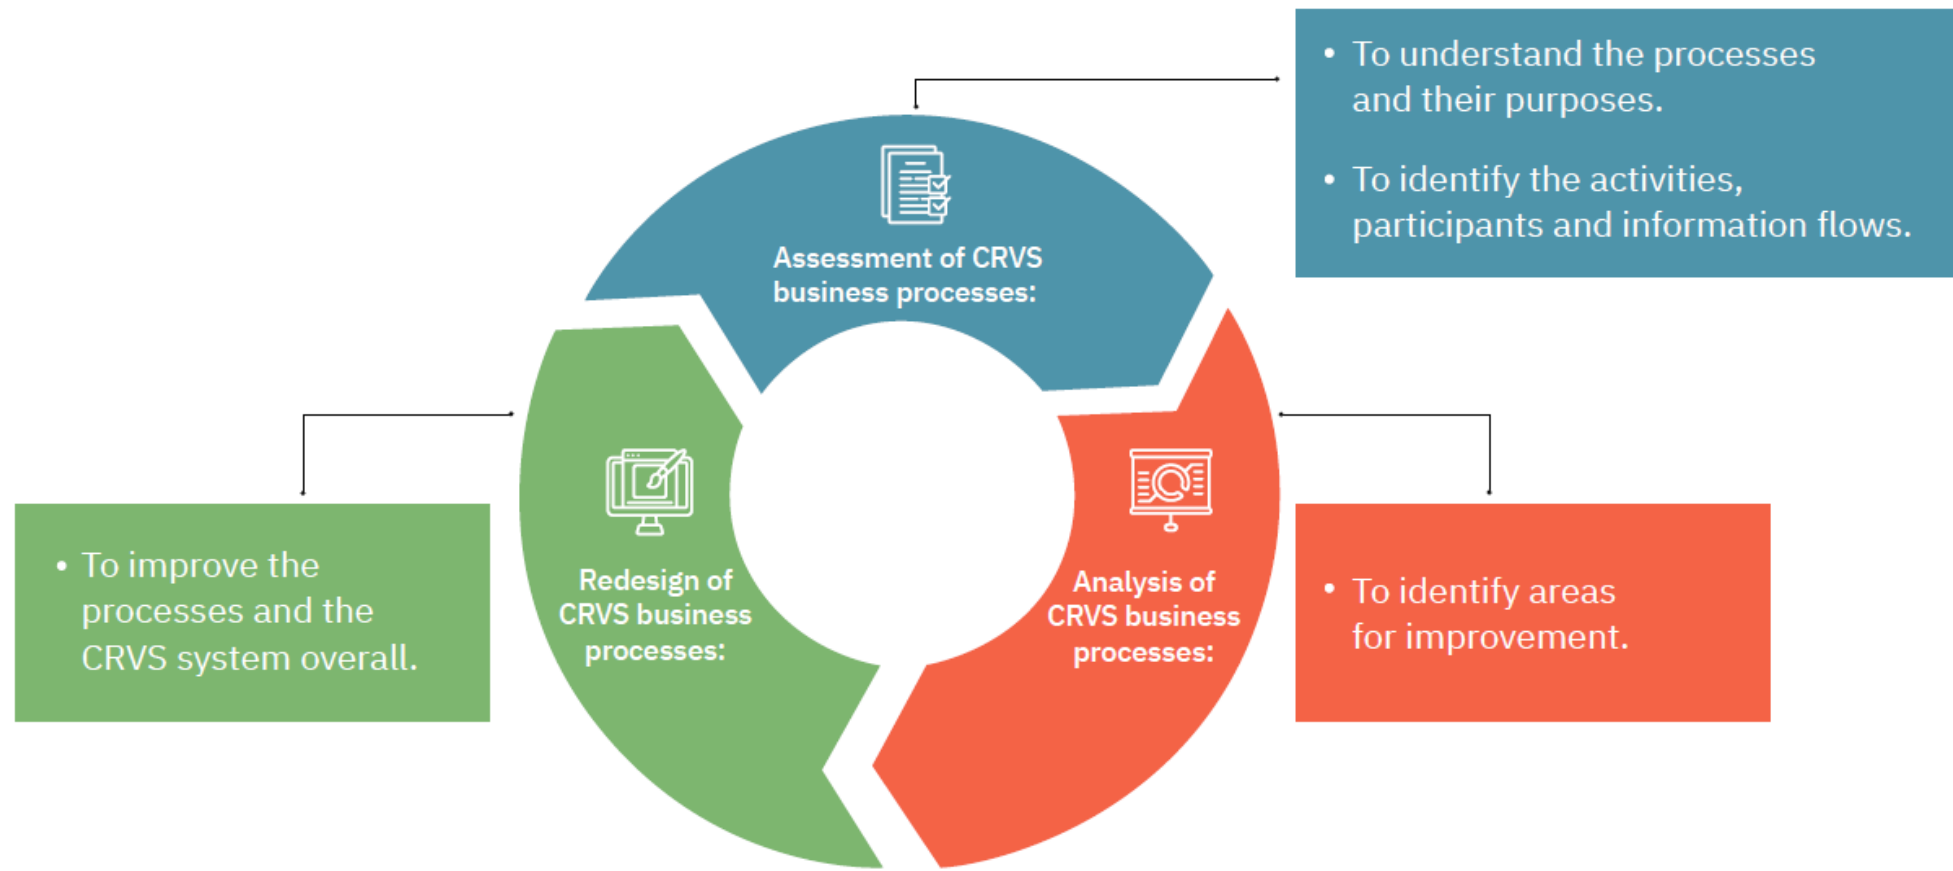

# Stages of The CRVS Systems Improvement Framework

Designed for iterative  
and modular application

# CRVS Systems Improvement Framework: Stage 1: Assessment, Analysis, Redesign

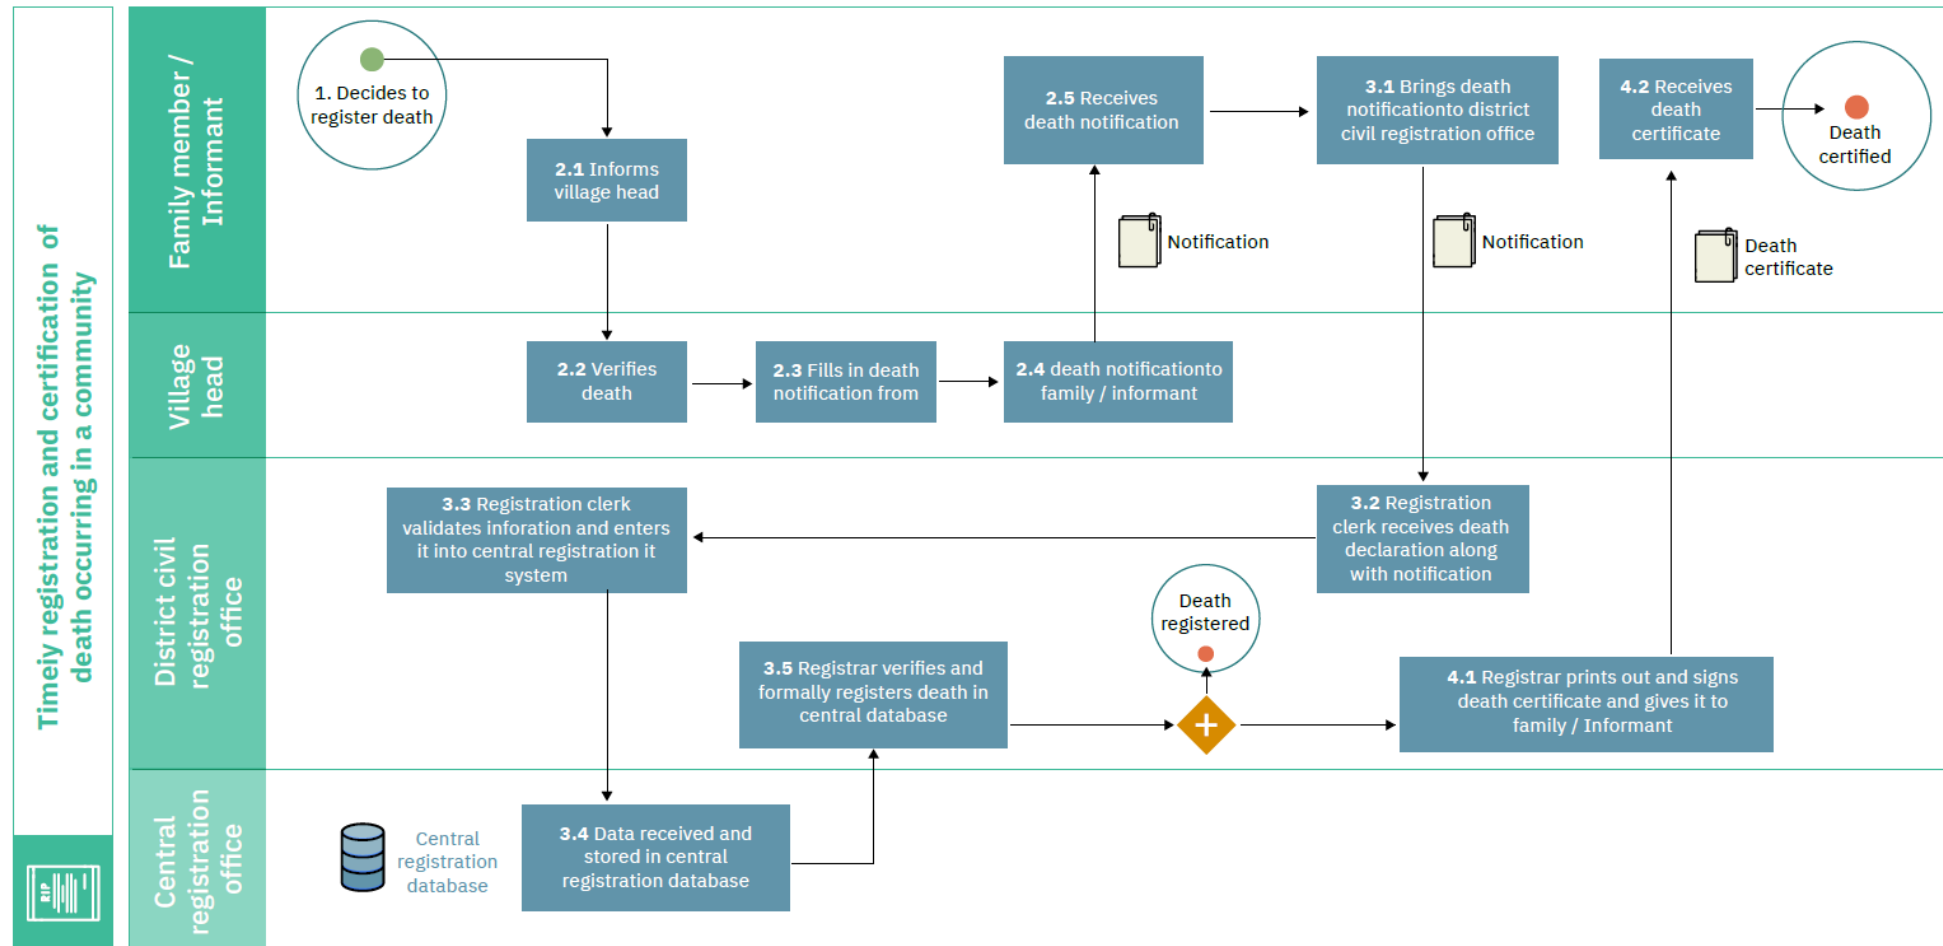

# CRVS Systems Improvement Framework: Implementation tools for Stage 1

- Business Process Map (BPM)  A process centric approach
  - Provides a visual documentation of the business process

Uses business process improvement principles to identify and improve an existing process to streamline its overall efficiency

# Business process map (BPM)

# CRVS Systems Improvement Framework: Implementation tools for Stage 1

- Business Process Map (BPM)  A process centric approach
  - Provides a visual documentation of the business process
    - Uses business process improvement principles to identify and improve an existing process to streamline its overall efficiency
- CRVS System Analysis and Redesign (CRVS-SAR) tool  A result driven & rights based approach
  - Guides the user through the Assessment, Analysis, and Redesign stage
    - Uses Key Performance Indicators to assess current status and define targets – focuses on improvement of client services and demand

# CRVS Systems Improvement Framework: CRVS-SAR tool

Assessment			Analysis		Redesign	
Key performance indicator (KPI)	Baseline information	Desired target	Performance issues	Root causes	Root cause category	Redesign ideas
Measures the <b>current performance</b> of CRVS systems against set targets for performance <ul style="list-style-type: none"> <li>• High-level</li> <li>• Client centric</li> <li>• Service provider centric</li> </ul>	Current Performance	Desired performance	Gap between desired performance and current performance (problem)	Deepest cause of performance issue	Main root cause category <ul style="list-style-type: none"> <li>• Human resources</li> <li>• Management and coordination</li> <li>• Business Process</li> <li>• Physical infrastructure</li> <li>• Policies, laws, regulations</li> <li>• Information Technologies</li> </ul>	Solution to address the root cause

# Rolling out of the stage-1 of the framework

- Establishment of a **core team** with relevant government stakeholders (usually led by the CR office)
- Identification of a **focal point** in the government
- Deployment of a senior advisor (if needed international) and local consultant(s) for guiding the process
- Orientation of the core team members on CRVS system strengthening using the framework
- Constitution of a smaller **working team** to undertake the activities in Stage-1 (in some countries)
- **Training** of the core team/working team members on business process mapping and CRVS SAR tool
- Implementation of **assessment, analysis, and redesign**-by the working team members with input from advisors as needed
- The core team briefed on the progress made by the working team regularly
- The findings of the assessments documented and the recommendations made for improvement based on **redesign ideas** presented to core team and high level committee for approval

# Outcomes that may be expected after implementation

1. In-depth understanding of end-to-end process by all CRVS system stakeholders
2. Detailed understanding in terms of the actions needed to address root causes of issues in the CRVS system
3. Design of a more efficient process that is expected to improve coverage, efficiency, and quality in services; for example
  - A more pro-active system
  - Optimal use of ICT
  - Timely delivery of services
4. Improved vital statistics including cause of death
5. Improved coordination and management (including M&E)

# Customization of the Framework to country need

Countries may be at different starting points; for example

- A comprehensive assessment may have been recently completed
- A strategic action plan may already exist
- The law may have been recently reviewed or amended
- The ICT infrastructure may be at different levels of maturity
- The human resource capacity may vary
- No vital statistics systems exist or vital statistics not routinely computed from civil registration data

**Application of the framework can be adjusted according to the above starting points**

# Country Examples: AAR Reports

# Vital Statistics based on civil registration data

# Vital Statistics : Definition and Sources

## Definition:

Vital statistics constitute the collection of statistics on **vital events**\* in a lifetime of a person as well as relevant characteristics of the events themselves and of the person and persons concerned.

## Main sources

- **Civil Registration System**
- Household Sample Surveys (for example SRS, DHS, MICS)
- Population Census

*Civil Registration is the best source of vital statistics*

\* Priority Vital events : live birth, death, foetal death/still birth, marriage, divorce

# Civil Registration – the best source of vital statistics

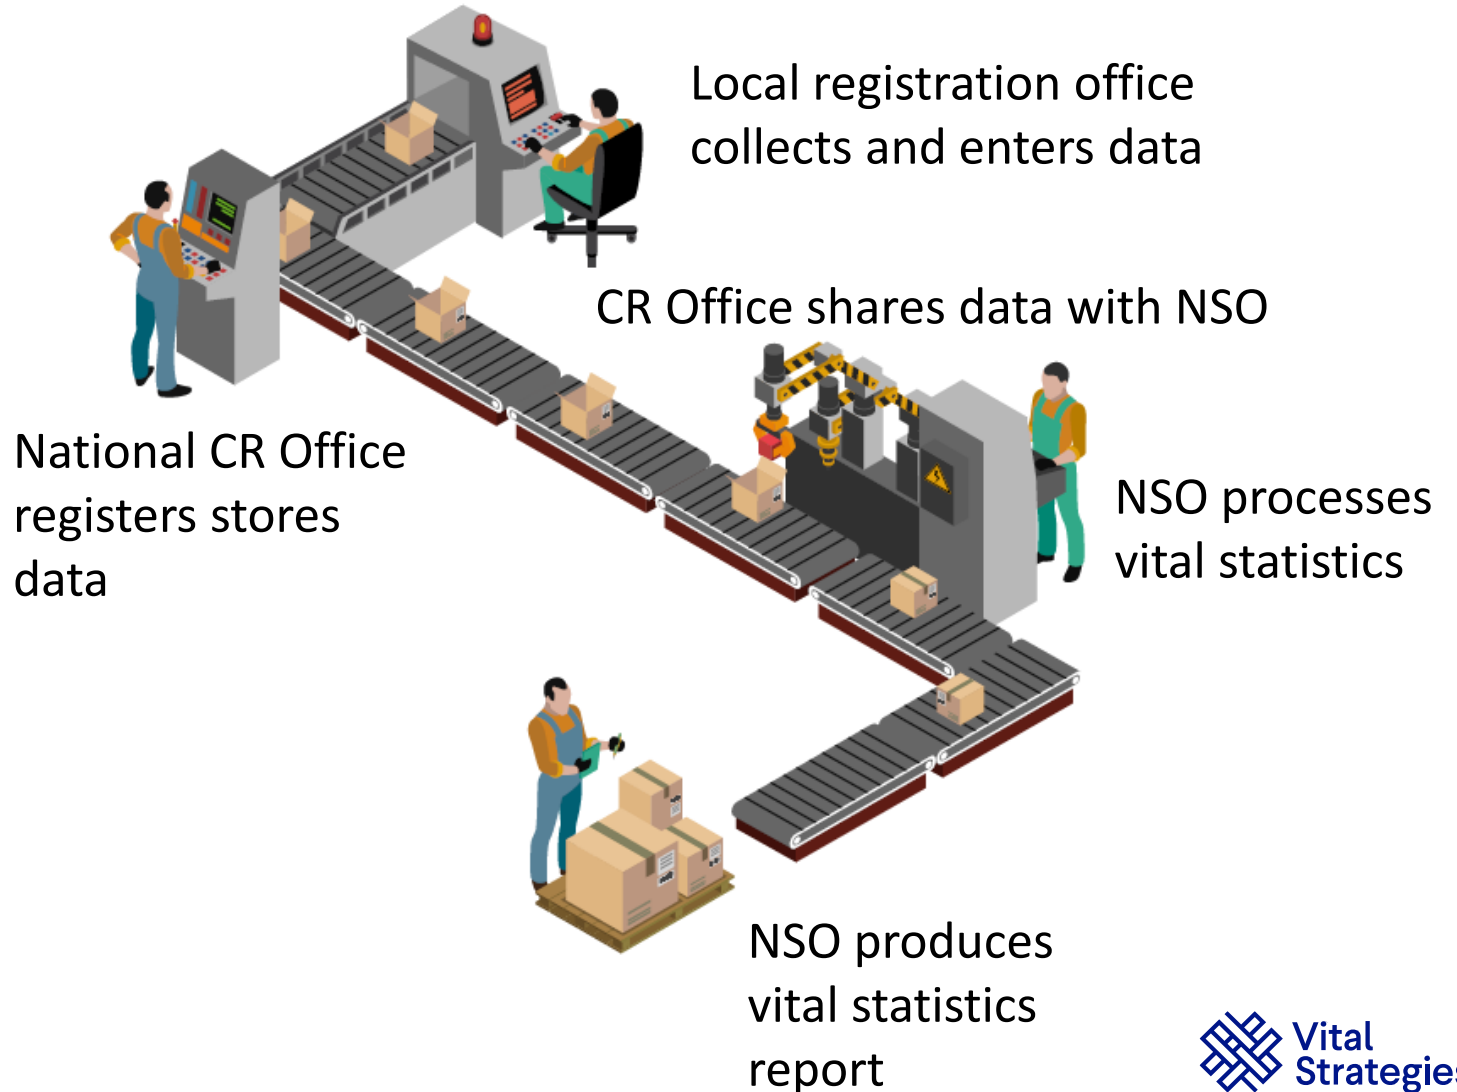

*Data collected from civil registration system is the best source of vital statistics because*

- ✓ *It is a continuous and permanent source*
- ✓ *It can produce data at lowest administrative level*
- ✓ *The data collected for civil registration is free from recall error and is unbiased*
- ✓ *Once established, it is the most inexpensive source*

# Generic Business Process for Production for Vital Statistics

A business process is a chain of events, activities and decisions organized logically to accomplish a certain goal.

1. Every process has some inputs
2. Different stakeholders perform some tasks
3. the process has some outputs

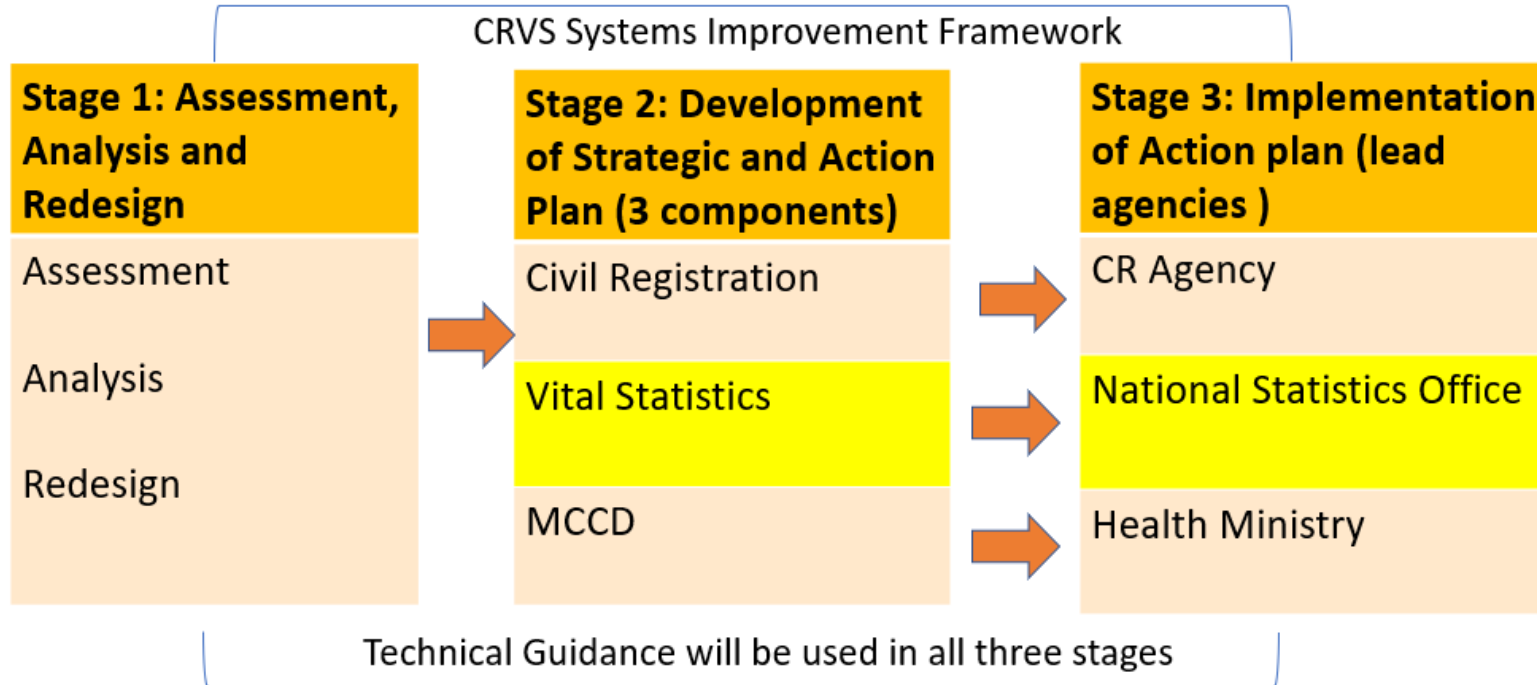

# Technical Guidance for Strengthening the Vital Statistics Production Process

“Vital Statistics Business Process Model (VSBPM)”

# VSBPM: an integral part of CRVS Systems Improvement Framework

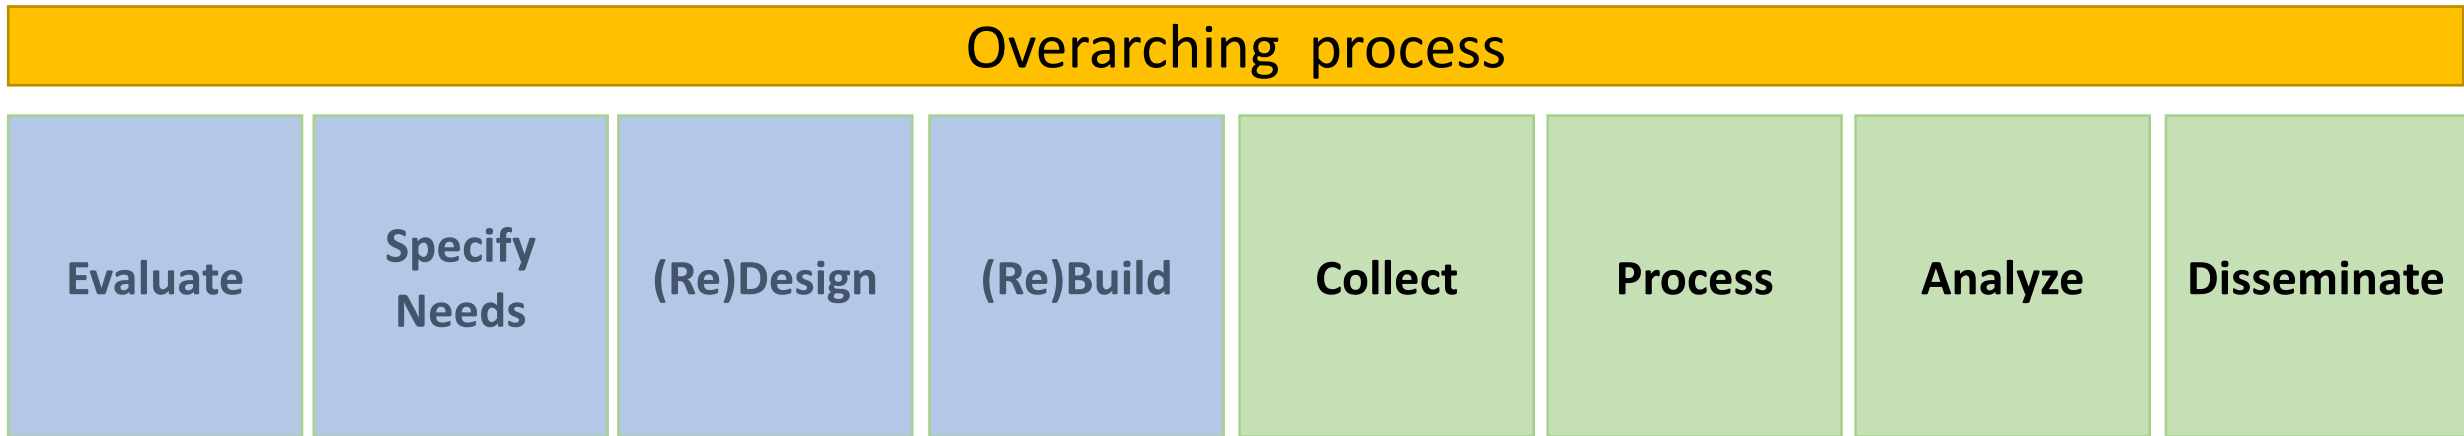

[Download the Technical Guidance for Strengthening the Vital Statistics Production Process](#)

# General Statistical Business Process Model (GSBPM)

Overarching Processes							
Specify needs	Design	Build	Collect	Process	Analyse	Disseminate	Evaluate
1.1 Identify needs	2.1 Design outputs	3.1 Reuse or build collection	4.1 Create frame and select sample	5.1 Integrate data	6.1 Prepare draft outputs	7.1 Update output systems	8.1 Gather evaluation inputs
1.2 Consult and confirm needs	2.2 Design variable descriptions	3.2 Reuse or build processing and analysis components	4.2 Set up collection	5.2 Classify and code	6.2 Validate outputs	7.2 Produce dissemination products	8.2 Conduct evaluation
1.3 Establish output objectives	2.3 Design collection	3.3 Reuse or build dissemination components	4.3 Run collection	5.3 Review and validate	6.3 Interpret and explain outputs	7.3 Manage release of dissemination products	8.3 Agree an action plan
1.4 Identify concepts	2.4 Design frame and sample	3.4 Configure workflows	4.4 Finalise collection	5.4 Edit and impute	6.4 Apply disclosure control	7.4 Promote dissemination products	
1.5 Check data availability	2.5 Design processing and analysis	3.5 Test production systems		5.5 Derive new variables and units	6.5 Finalise outputs	7.5 Manage user support	
1.6 Prepare and submit business case	2.6 Design production systems and workflow	3.6 Test statistical business process		5.6 Calculate weights			
		3.7 Finalise production systems		5.7 Calculate aggregates			
				5.8 Finalise data files			

# Phases of Vital Statistics Business Process Model (VSBPM)

Phases of VSBPM that are within the domain of Civil Registration agency. The agency responsible for producing vital statistics has a big role to play in each of these phases.

Phases of VSBPM which are fully within the domain of the agency responsible for producing vital statistics.

# Vital Statistics Business Process Model (VSBPM)

Overarching process

Evaluate	Specify Needs	(Re)Design	(Re)Build	Collect	Process	Analyze	Disseminate
1.1 Prepare for evaluation	2.1 Identify data needs	3.1 Develop potential redesign ideas	4.1 Reuse or build collection Design collection	5.1 Run collection	6.1 Classify and code	7.1 Prepare draft tables	8.1 Produce dissemination products
1.2 Undertake desk review	2.2 Consult and confirm needs	3.2 Design As-Desired BPM	4.2 Reuse or build processing and analysis components	5.2 Monitor collection	6.2 Review and validate	7.2 Validate draft tables	8.2 Manage release of dissemination products
1.3 Identify Key Performance indicators and performance issues	2.3 Establish output objectives	3.3 Develop Strategic and Action plan for CRVS improvement	4.3 Reuse or build dissemination components		6.3 Edit and impute	7.3 Finalize outputs	8.3 Promote dissemination products
1.4 Develop As-Is Business Process Maps (BPM)	2.4 Determine concepts and descriptions	3.4 Develop Strategic and Action plan for VS systems improvement	4.4 Test production system		6.4 Finalize data files		8.4 Manage user support
1.5 Analyze root causes through consultation and field assessment	2.5 Decide on periodicity of collection	3.5 (Re) Design outputs	4.5 Test Statistical business process				
		3.6 (Re) Design collection	4.6 Finalize production system				
		3.7 (Re) Design processing and analysis					

Sub-processes of VSBPM which are also integral part of overall CRVS improvement process

Sub-processes of VSBPM which are fully under the domain of VS improvement process

# Steps to be taken to implement the Framework

- Establishment of a **Technical Support Team (TST)** as soon as the government decides to implement the Framework
- Using the guidance in the Framework, TST will
  - **Assess** current system of vital statistics production (if exists) and its output
  - Identify **data needs** aligned with the UN standards for tabulations
  - **Map** as-is processes and suggest **redesigned processes**
- The TST will then prepare a **Technical Note** that will include among other things, all the above
- The TST will be responsible for preparing a detailed **action plan** for production and dissemination of vital statistics and guide its implementation
  - Proposing enhancements of human resources and technology to meet the new demands
  - Advocating for additional resources for implementation

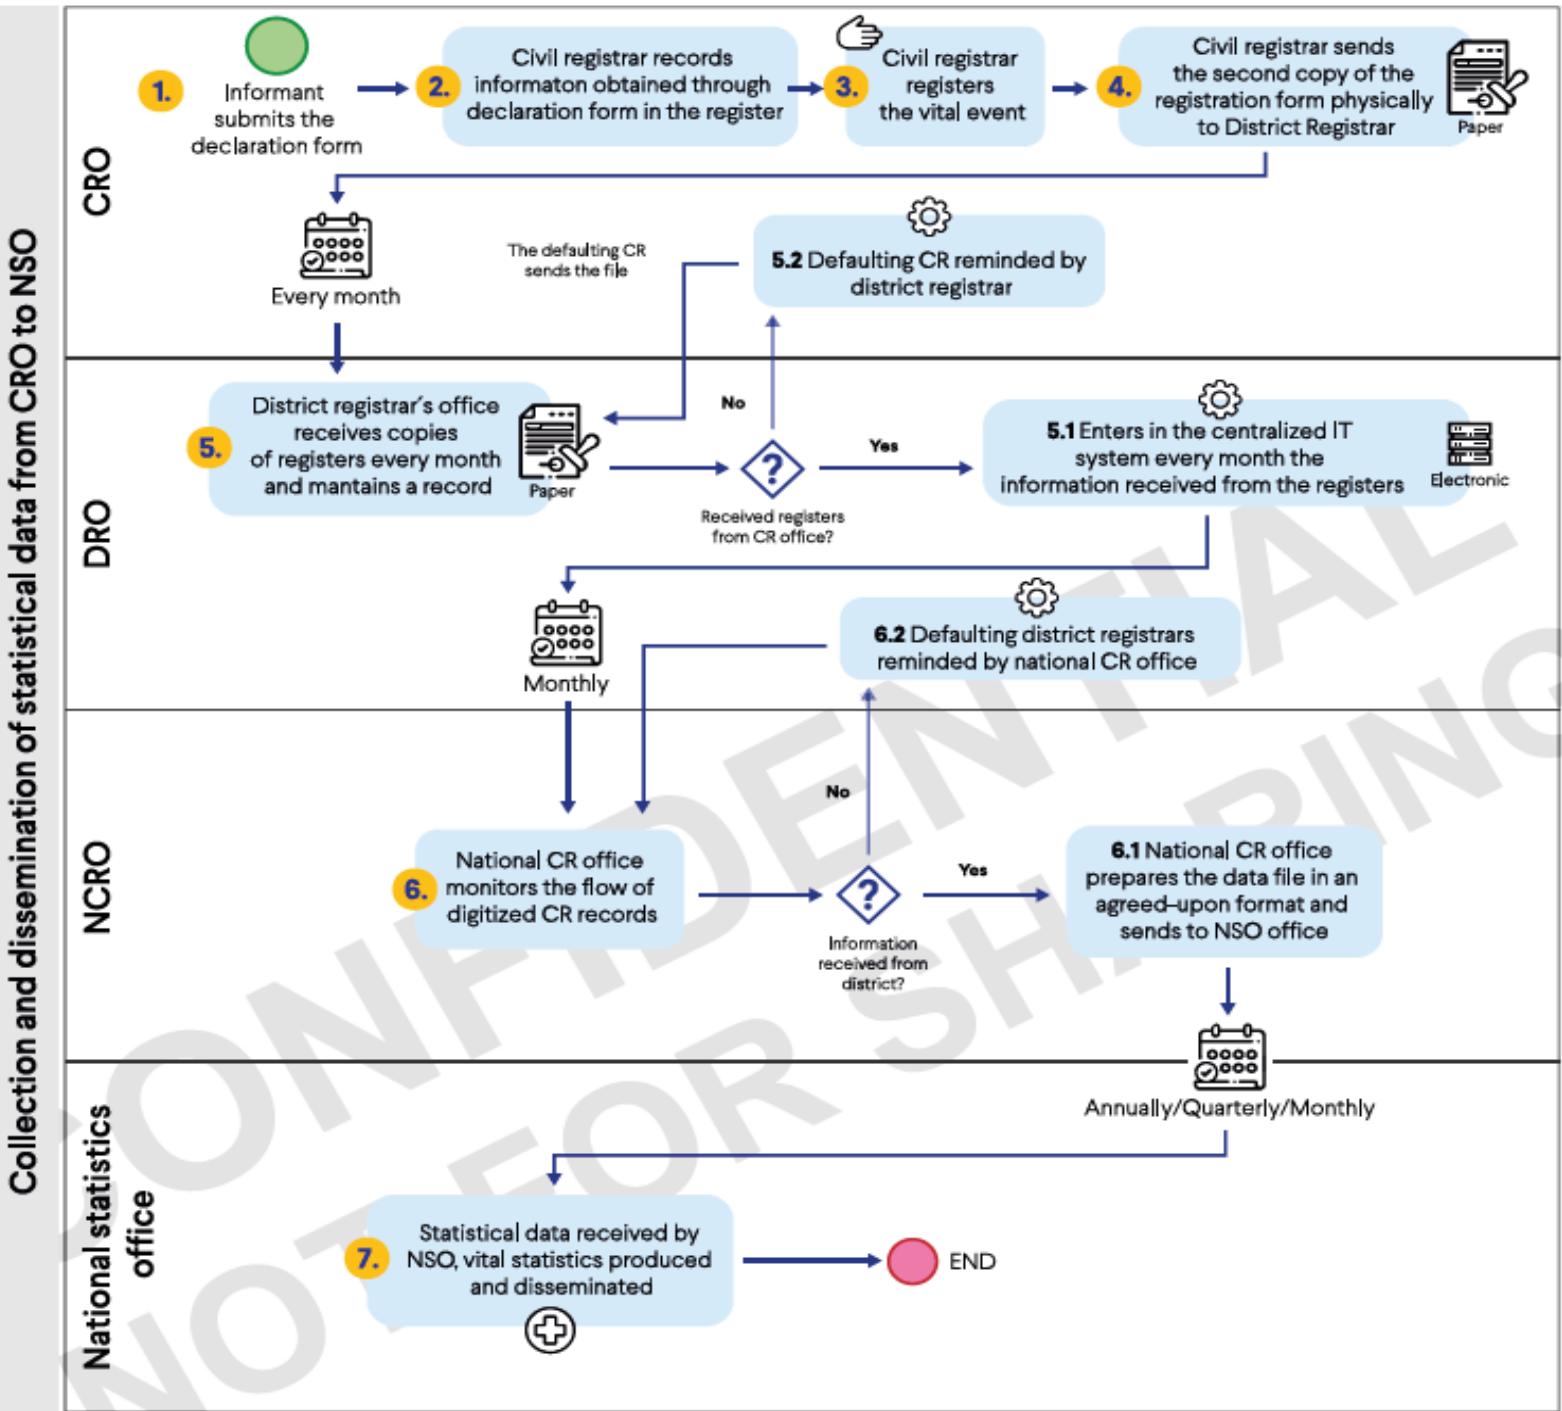

# Technical Note

The Note will include 11 chapters

- Chapter I: Background
- Chapter II: Current status
- Chapter III: Proposed tabulations and data needs
- Chapter IV: As-desired Business Process Maps
- Chapter V: Mechanism for monitoring of data collection
- Chapter VI: Human resources
- Chapter VII: Coordination
- Chapter VIII: IT infrastructure and software requirement
- Chapter IX: Data dissemination strategy
- Chapter X: Quality management for collection, processing, tabulation, and dissemination of vital
- Chapter XI: Advocacy and communication

# As-is Business Process Map

# Plans for overall strengthening of CRVS and VS systems and their interconnection

<b>Vital statistics subplan of the overall improvement plan of the CRVS system</b>				<b>Plan for improvement of vital statistics system</b>			
<b>Strategic goal: “Produce and disseminate timely and quality vital statistics”</b>				<b>Strategic goal: “Produce and disseminate timely and quality vital statistics”</b>			
<b>Examples of outputs</b>				<b>Examples of outputs</b>			
Newly designed declaration form and/or registration data collection instrument introduced	Established online registration system in a phased manner	Contents in the data collection instrument aligned with the UN priority list	Report on the legal review obtained and examined	Monitoring framework for tracking flow of statistical data established	Template for the annual vital statistics report finalized	Data quality management framework established	Strategy and action plan for dissemination of vital statistics report finalized
<i>Lead agency: NSO and CRO jointly Main support agencies: health department and relevant development partners</i>				<i>Lead agency: NSO Main support agencies: CRO, health department and relevant development partners</i>			

# Thank you
